

An intuitive IP molecule search

Get **easy access** to chemical information when reading a patent and a **simplified search** for molecules.

Our vision

A molecular **synonym search** directly accessible from your **advanced search** page will allow you to launch a **simplified patent search**.

Save time

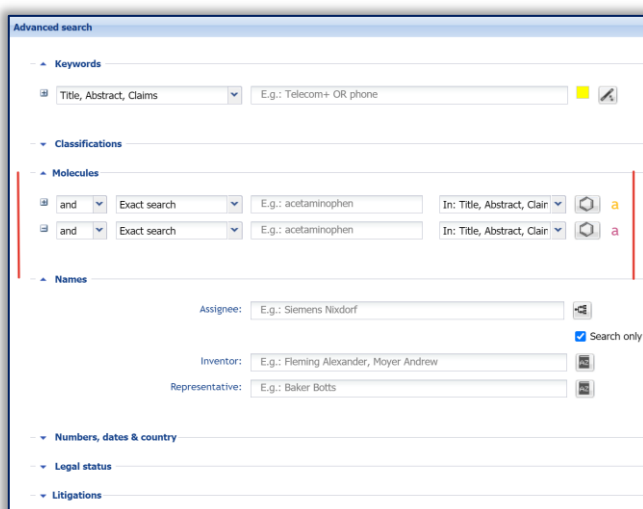

Search for patents with **Common names, Drug names, Acronyms, IUPAC names, CAS numbers, Molecules drawings**. Orbit Chemistry also allows to search **SMILES**.

Rapidly locate the searched molecules

Find the highlighted molecules of interest in the search results page. By hovering your cursor over its name, you will see the **molecule drawn**. In the **KWIC tab**, you will access all synonyms identified in the patents.

Tailor your search to your needs

Customise your search by using the sketcher to draw your own molecule. Perform an **exact or sub-structure search** with a single click and save time by importing your **.mol file** directly.

The screenshot shows the 'Advanced search' interface with several sections:

- Keywords:** A search box containing 'E.g.: Telecom+ OR phone'.
- Classifications:** A section with a dropdown menu.
- Molecules:** Two rows of search criteria. Each row includes a dropdown for 'and', a dropdown for 'Exact search', a text input 'E.g.: acetaminophen', and a dropdown for 'In: Title, Abstract, Claim'.
- Names:** Fields for 'Assignee: E.g.: Siemens Nixdorf', 'Inventor: E.g.: Fleming Alexander, Moyer Andrew', and 'Representative: E.g.: Baker Botts'. A 'Search only' checkbox is also present.
- Numbers, dates & country**
- Legal status**
- Litigations**
